Empowering VET Institutions towards Greener Initiatives

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

The project

In the face of the current climate crisis, tomorrow's jobs require skills that meet the demands of the green and digital transformation. Investments in greening VET are considered a cornerstone of the process as they can have positive impacts on several levels:

- They improve the employability of workers and the productivity of enterprises as they reflect current and future labour market needs.
- They support sustainable lifestyles and increase awareness and motivation to develop a green culture.
- They make VET more attractive to learners and communities by promoting green competences.

The everGREEN project envisages the adoption of innovative practices that prepare VET communities, including managers, staff and learners, to initiate the greening process of the sector and to change behaviour and adopt a greener mindset at both professional and personal levels.

Objectives

- To introduce innovative practices to support VET communities in becoming agents of change toward sustainable development through the adoption of a whole-institute green approach.
- To support VET institutions in adapting their offerings to the current and future needs of the economy and society through flexible resources and methods and by providing individualized upskilling opportunities.
- To support the development of VET learners' green skills and employability potential within the current labour market.
- To foster transnational cooperation in greening VET provision and to facilitate the adoption of a sustainable mindset in society.

Activities

- Development of scenarios and minicourses to support VET institutions in achieving and implementing their green goals.
- Design and delivery of online training courses and one transnational event to enhance VET staff's understanding of sustainability.
- Creation of Greening Plans by VET staff to test the resources developed and the knowledge gained.
- Creation of the everGREEN VET Alliance to promote and support green practices at European level.
