

Dear readers,

We are thrilled to announce that the everGREEN consortium has successfully launched the first outcome of the "everGREEN_In - Empowering VET Institutions towards Greener Initiatives" project, generously funded by the Erasmus+ programme. After months of dedicated work, we are excited to share the progress made thus far.

WHAT HAS BEEN DONE

Through extensive study and research, the consortium has meticulously developed a comprehensive "Mapping of greening practices" across Germany, France, Slovenia, Greece, Italy, Belgium, and Luxembourg. This endeavour involved identifying and documenting successful green initiatives within vocational education and training systems. Additionally, the consortium has created the "Nine greening scenarios" document, which offers practical recommendations and measurable indicators to facilitate monitoring the green transition process. This report provides inspiring examples and actionable steps that can guide institutions in achieving higher levels of greening.

PARTNERS

ABOUT THE FRAMEWORK

The heart of our efforts lies within the Framework document itself. In it, the everGREEN project partnership presents a user-friendly four-step framework designed to empower VET institutions to embrace sustainability and become catalysts for positive change. This Framework is a guiding resource, emphasizing the significance of greening and its institutional benefits. It incorporates key elements to help VET leaders and their teams comprehend the scale, scope, and critical steps required to successfully implement greening in their institutions and programs. The Framework covers four distinct areas for greening implementation: Greening the Campus, the Curriculum and Training, the Community and Workplace and the Organizational Culture. These areas collectively contribute to a holistic approach that ensures practical reorientation of VET towards addressing emerging needs.

NEXT STEPS

We are excited to share that our consortium is currently focusing on the development of the second outcome of the project. This upcoming phase involves the creation of a comprehensive Support Tool. This valuable resource will offer integrated guidance services to VET institutions, aligning perfectly with the 4-step everGREEN_In Framework. It aims to provide tailored support to facilitate their greening journey introducing upskilling mini-courses within the Support Tool and training for VET, enabling users and VET institutes to acquire specific knowledge and skills based on their unique requirements and the scenario they are following.

STAY TUNED FOR MORE!

We are committed to sharing more information and insights about our ongoing work, including the release of the Support Tool and the incorporation of upskilling mini-courses.

Together, let's empower VET institutions to embrace sustainability and drive positive change!
